QUANT

Stuttgart, Germany

QUANT is a new luxury apartment project in Stuttgart. It is a conversion of an old 1960's laboratory building. In order to give potential buyers a feeling for the numerous design possibilities inherent in a QUANT apartment, the landlord LBBW Immobilien GmbH has created an exceptional model apartment in cooperation with acclaimed partners from the Stuttgart area. Ippolito Fleitz Group has created an interior to complement the building's sophisticated exterior designed by Wilford Schupp.

Similar to a loft space, the apartment is immediately tangible as a continuous space. All functions are accommodated in freely defined areas, which can be closed off by means of sliding doors and heavy curtains, if so desired.

The spacious kitchen with its freestanding cooking block and expansive dining table form the main focal point of the apartment. A mirrored ceiling lends impressive definition to the dining area, which is separated from the soft seating landscape by an open room divider. This enables the diner to keep kitchen, living area and terrace in full view.

The private part of the apartment is designed around sleeping, working and enjoying the expression on guests' faces when you show them around. The bedroom and study form a common zone, defined by a circle of oak, encasing wall, floor and ceiling. The dividing wall has integrated sliding doors to separate the two areas, and simultaneously serves as a headrest for the bed and a back to the desk.

The flowing room concept is supported by an ingenious composition of materials and colours: the elegant, olive green, epoxy resin-coated floor, oak wood surfaces, white varnished finishes, sensual fabrics and coloured walls engage in an exciting dialogue with one another and, of course, with the apartment's occupants.
